SOLUTION OVERVIEW

Rapid Health Check with Claroty Edge

Effective cyber-physical systems (CPS) security starts with knowing what needs to be protected. The Claroty Edge Rapid Health Check gives your organization a fast, detailed view of the assets on your network and the risks attached to them, with no hardware installation and no network reconfiguration.

Core benefits for your organization

Visibility in minutes

Edge delivers asset discovery and risk evaluation within minutes. Your team starts the security conversation with network-specific data instead of assumptions.

Safe for operations

Edge runs as a lightweight, non-persistent executable and maps your network safely without disrupting operations. It is agentless, works in on-premises and SaaS environments, and leaves no trace or burden on existing assets.

Findings your team can act on

Edge returns an immediate inventory of connected assets, missing patches, and known vulnerabilities. Your team gains a clear foundation for prioritizing risk mitigation.

How it works

Edge is a flexible data collector that can be deployed at the deepest layers of the network. Using automated safe queries, it builds a detailed view of your assets and the associated risk metrics, so your team sees which assets matter most before any remediation begins.

Edge enriches each asset profile with:

- Asset attributes
- Vulnerabilities
- End-of-life (EoL) status
- Installed applications
- Network-based exploitability factors

Flexible deployment. Edge runs as a one-time or scheduled, recurring executable on Windows and Linux-based hosts. With Docker support, it can also run on existing Linux-based infrastructure, such as firewalls and switches. This helps your team reach air-gapped or hard-to-access network segments without provisioning new hardware.

What your team receives

At the end of the Health Check period, Claroty provides a detailed report of your results.

Asset inventory

A complete view of connected assets, organized by device type, so your team knows what is on the network.

Vulnerability insights

Total vulnerabilities, adjusted severity scores for high and critical findings, and which vulnerabilities are actively exploited.

Patch and upgrade status

Which assets have patches or version upgrades available, so your team can sequence maintenance windows.

Risk by device type

Severity broken down by asset class, such as engineering stations, PCs, and programmable logic controllers (PLCs).

What the engagement looks like

1 Scope

Claroty and your team agree on the time period and asset scope for the Health Check.

2 Run Edge

Claroty works with your team to run Edge in your environment for the agreed period and scope.

3 Review results

Claroty provides a detailed report your team can share with operations, security, and leadership.

Build on your results

- **Prioritize remediation.** Address vulnerabilities and compliance gaps where risk is highest.
- **Move to continuous protection.** Extend this assessment into ongoing protection with the Claroty Platform.
- **Plan with evidence.** Use Health Check data to guide long-term security architecture and modernization projects.

See what is connected to your network.

About Claroty

Claroty empowers organizations to protect the mission-critical infrastructure that underpins modern life. The AI-powered Claroty Platform serves as the single source of operational truth, providing the deepest visibility and broadest protection across cyber-physical systems (CPS), leveraging five core solutions: asset inventory, exposure management, network protection, secure access, and threat detection. Claroty helps organizations operationalize CPS protection through a programmatic approach designed to reduce risk, maintain operational integrity, and meet compliance–whether in the cloud with Claroty xDome or on-premise with Claroty Continuous Threat Detection (CTD). Claroty is deployed by hundreds of organizations at thousands of sites globally. The company is headquartered in New York City and has a presence in Europe, Asia-Pacific, and Latin America.
